

# FOOT & ANKLE SURGICAL GROUP

*Philip J. Larsen, DPM*

12/10/2015

Name: Anthony Becker

Age: 75 Year old male

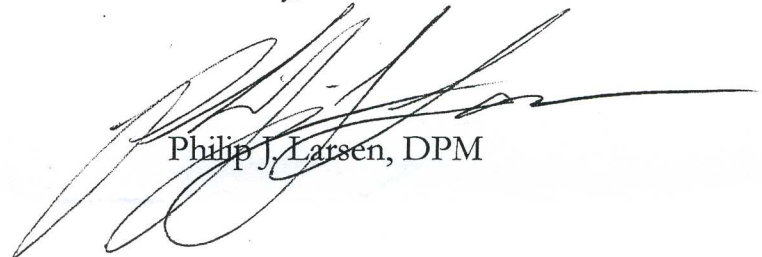

To whom it may concern.

This is explanation; narrative of the procedures performed for the ulcer with the patient's left foot. Mr. Becker has had a chronic ulceration under the ball of the left foot due to an equines and diabetic neuropathy. It was addressed by local wound care, weekly debridements and Electrical -Photonic Stimulation (Thera Gem crystal light therapy). This has healed the forefoot ulcer under the 4<sup>th</sup> metatarsal. If left untreated he has the possibility of losing his left foot or leg. Using a total of 20 treatments, from 4/2/15 to 5/8/15. His ulcer did heal completely and has stayed healed as to date. He has had a history of ulcers that in the past have had to be treated with hyperbaric oxygen treatments, that did work but were very expensive. It is of my opinion that the Thera Gem treatments did help Mr. Becker to heel his ulcer.

Feel free to call me with any questions.

Thank You.

Sincerely,

A handwritten signature in black ink, appearing to read 'Philip J. Larsen', with a long horizontal flourish extending to the right.
