

12/10/2015

Name:

Age: 75 Year old male

To whom it may concern.

This is explanation; narrative of the procedures performed for the ulcer with the patient's left foot. Mr. — has had a chronic ulceration under the ball of the left foot due to an equines and diabetic neuropathy. It was addressed by local wound care, weekly debridements and Electrical –Photonic Stimulation (Thera Gem crystal light therapy). This has healed the forefoot ulcer under the 4th metatarsal. If left untreated he has the possibility of losing his left foot or leg. Using a total of 20 treatments, from 4/2/15 to 5/8/15. His ulcer did heal completely and has stayed healed as to date. He has had a history of ulcers that in the past have had to be treated with hyperbaric oxygen treatments, that did work but were very expensive. It is of my opinion that the Thera Gem treatments did help Mr. — to heal his ulcer.

Feel free to call me with any questions.

Thank You.

Sincerely,
